PROFESSIONAL SUMMARY

I have worked in game development for many years with a focus on gameplay systems. The games I have worked on are multiplayer shooters, requiring the systems I made to have robust networking.

HOBBY

Outside work I've consistently been working on my own game engine, deepening my knowledge of both game engines and coding in general. This has given me a very good foundation and context for how things work outside what I normally interact with.

EXPERIENCE

Gameplay Engineer

Aug 2019 – Present

Sharkmob • Malmö

Joined as an intern for the first year and was a junior until 2022. Worked on two games as the main ability system engineer using two different ability systems, one of them was created in-house and the other one was the Unreal Gameplay Ability System. The highlight has been working with the other disciplines to create the best experience for players.

PROJECTS

Bloodhunt

Gameplay Engineer

Main engineer on the ability system and settings, but did minor work on most parts of the game.

Exoborne

Gameplay Engineer

Main engineer on the ability system and many other systems supporting it.

LANGUAGES AND OTHER NOTABLE EXPERIENCE

- C++ (Education + Work)
- C# (Hobby + Education)
- Unreal Engine (Work)
- Unity (Hobby + Education)
- Direct X 11/12 (Hobby + Education)

EDUCATION

Game Programming

Aug 2017 – Apr 2020

The Game Assembly • Malmö

Higher Vocational Education dedicated to game dev. Half-time learning C++ and everything needed to make a game engine. Half-time creating games in multi-disciplinary teams, making 8 games over 2 years where the latter half of them where 3D games in an engine we made ourselves. For these games I focused mostly on creating various systems, both for engine and gameplay. The education concluded with a year of internship, which I got at Sharkmob.

Game Development

Aug 2014 – Jun 2017

LBS • Jönköping

High school with focus on game dev and other creative arts. Learned coding using C# (in XNA and Unity) and some web development using HTML, PHP and JS. There was also long-term project work every week where we collaborated with other people of multiple disciplines to make games, which prepared me well for the future.
